

Heye Newsletter II, October 2015

INTRODUCTION

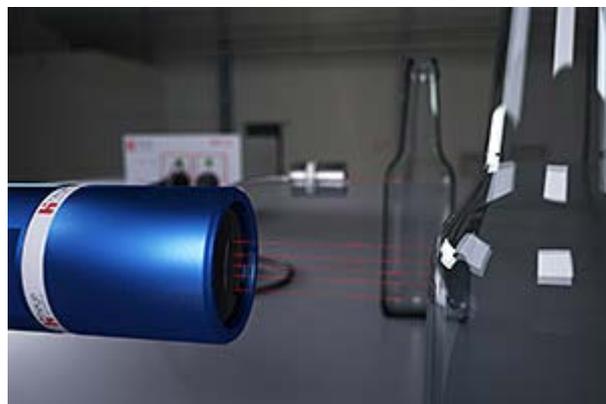

Only two more months until the new year. Politically, 2015 will again be a year full of changes and unforeseen developments. Nevertheless, thanks to our customers, this year will be a very strong one for us. The budgets for 2016 are already set or shortly before. Plan in any case with Heye - your partner for innovation and productivity.

Yours,
Dirk Pörtner

SPEEDLINE IS-MACHINES

The Heye [SpeedLine IS-Machine](#) does its name justice. In a plant in the Netherlands, the production of a 660ml beer bottle runs now 15% faster at a very high pack-to-time. Bringing together speed and quality is no miracle. Reason no. 1 is the competent, well-organized and ambitious team in the plant. Reason no. 2 is the equipment: Highest quality materials and precise manufacturing processes combine speed with minimum wear-out, resulting in a machine life-time of up to 15 years. Flexibility is guaranteed through quick change between number of gobbs, production methods or by different weights on the same machine.

MULTIPOINT WALL THICKNESS

The new [Multipoint Thickness Sensor MTS10/05](#) is a milestone in wall thickness measuring. Together with the MTE 12 electronic module it offers you the flexibility to cover all critical areas of a container. The Heye MTS10/05

is equipped with 5 measuring points spaced 2.5 mm apart. The very precise chromatic confocal method allows a wide range of possible set-ups. Suitable for round and many different non-round containers.

Message in a Bottle

As winter comes nearer and, in Europe, the weather gets ever colder, there is nothing more warming than wrapping your hands around a glass of your favourite hot drink. Here in Germany, that drink will traditionally be a mulled wine, or “Gluehwein”. Recipes for this winter warmer can be found as far back as the fourteenth century. Hot wine is combined with herbs and spices such as cinnamon, ginger, cloves, nutmeg, marjoram and cardamom. Cheers!

DIAMETER AND OVALITY INSPECTION MODULE (DOM)

With the non-contact [diameter and ovality inspection](#) on the SmartLine, it is possible to inspect round bottles for minimum and maximum diameter and the ovality at up to three levels. Two sensors per inspection level on both sides scan the sidewall of the spinning container. Set-up and configuration of this non-contact inspection is very easy by means of the user interface of the SmartLine inspection machine.
